

# Pollution Tracker Fact Sheet

## Hexabromocyclododecane (HBCD)

### What is it?

Hexabromocyclododecane (HBCD) is a brominated flame retardant, used primarily in polystyrene foams for thermal insulation in the construction industry. HBCD is also used as a flame retardant on upholsteries, wall coverings, and draperies.<sup>1</sup> HBCD is not known to be manufactured in Canada, but is still in use.

### How does it get into the ocean?

The major pathways by which brominated flame retardants enter the marine environment are likely landfill runoff and leaching from finished products into wastewater systems.

Like other flame retardants, HBCD is persistent and bioaccumulates in food webs.<sup>2</sup> However, while regulations appear to have resulted in decreasing concentrations of other flame retardants such as PBDEs<sup>3,4</sup>, HBCD concentrations may be increasing.<sup>5</sup>

### Is it a problem?

Brominated flame retardants as a group are known to have toxic effects to immune, thyroid, reproductive, and neurological systems in terrestrial and aquatic organisms.<sup>7,8</sup>

In rats, HBCD exposure has been shown to cause increases in liver weight and changes to the thyroid system<sup>9</sup>, while in mice, HBCD exposure caused developmental neurotoxicity.<sup>10</sup>

FACT: HBCD concentrations increased exponentially in the eggs of rhinoceros auklets, Leach's storm-petrels, and ancient murrelets between 1990 and 2011.<sup>6</sup> Low levels of HBCD were also detected in the eggs of cormorants and herons in British Columbia starting in 2003.<sup>3</sup>

## What is being done?

In 2016, HBCD was added to Canada's Toxic Substances Regulations. As of January 1, 2017, the manufacture, use, sale, and import of HBCD, as well as building and construction materials containing HBCD were prohibited in Canada.<sup>11</sup> In 2016, the European Union also prohibited the manufacture, use, and sale of HBCD.

Canadian federal environmental quality guidelines (FEQGs) have been developed for HBCD in water and sediment.<sup>12</sup>

## What can we do?

As individuals and organizations, we can:

- Learn more about HBCD and other brominated flame retardants using the resource links below
- Recycle and dispose of waste responsibly and according to local guidelines
- Avoid using products that contain HBCD and other contaminants of concern. The US EPA's Safer Choice program identifies products that are safer for humans and the environment and can be used as a reference to check product ingredients.<sup>13,14</sup> The Green Science Policy Institute also provides information regarding consumer choices.<sup>15</sup>
